## PROFESSIONAL SUMMARY

---

Second-year Computer Science student with hands-on experience building and deploying full-stack web applications. Comfortable across the stack with JavaScript, React, Node.js, and Python, backed by strong fundamentals in Data Structures, Algorithms, and OOP from C++. Has shipped a production cloud-storage SaaS platform and is currently building an AI-powered interview assessment system using computer vision and speech analysis. Seeking internship and entry-level opportunities in frontend or full-stack development where these skills can contribute to impactful, real-world technical projects.

## TECHNICAL SKILLS

---

**Languages:** JavaScript, TypeScript, Python, C++

**Frontend:** React, HTML5, CSS3, Responsive Web Design

**Backend & Databases:** Node.js, Express.js, REST APIs, PostgreSQL (Supabase), SQLite

**Tools & Practices:** Git, GitHub, JWT Authentication, Vercel/Render Deployment, OOP, Data Structures & Algorithms

**Currently Learning:** Computer Vision & NLP for AI applications (CLIP, Whisper, MediaPipe)

## PROJECTS

---

### DriftIQ — Cloud Storage Platform [Live Demo](#)

*Node.js, Express.js, Supabase (PostgreSQL), JWT, Telegram Bot API, Vanilla JS, CSS*

- **Built and deployed** a production-ready full-stack cloud storage SaaS that uses the Telegram Bot API as a file storage backend, paired with a PostgreSQL database (via Supabase) for metadata and user management.
- **Implemented secure authentication** using JWT and bcrypt password hashing, with row-level security in the database and rate limiting, input validation, and security headers (Helmet) hardening the API.
- **Developed core features** including nested folder organization, password-protected public file sharing with expiry, storage usage analytics, and an admin dashboard.
- **Deployed live** on Render/Vercel with a responsive, dark-mode glassmorphism UI and 30+ REST API endpoints across auth, files, folders, sharing, and admin modules.

### Persona — AI-Driven Interview Assessment System [In Progress](#)

*Python, Django, PyTorch, OpenAI Whisper, MediaPipe, CLIP/BLIP/ViT*

- **Currently building** an AI-powered mock interview platform that analyzes a candidate's recorded video/audio responses to score attire, body language, and speech fluency.
- **Designing ML pipelines** using CLIP/BLIP/ViT for attire and professionalism detection, MediaPipe for posture and eye-contact tracking, and Whisper for speech-to-text and fluency analysis.
- **Architecting the platform** as a modular Django application supporting two user types: individuals practicing for predefined roles, and recruiters who can create custom roles and shareable assessment links.

### Earlier C++ Projects (Bank, Library & Railway Systems)

*C++, File Handling, OOP*

- **Designed three console-based applications** — a bank management system, a library management system, and a railway reservation system — applying structured programming, modular design, and file handling to manage records and transactions.

## EDUCATION

---

### Greater Noida Institute of Technology

*Bachelor of Technology (B.Tech), Computer Science and Engineering | Expected Graduation: 2029*
